

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph at Page 13, lines 1 – 19 with the following amended paragraph:

Further to this example, interface box 334 includes a wireless interface 344, a web server ~~application~~ 346, a printer driver 350 and an Ethernet interface 356. When a user wants to generate a hard copy of the electronic document 338, they establish a wireless connection between wireless device 332 and interface box 334. Using browser 340, the user then communicates with web server 346 to request a hard copy of an electronic document, for example electronic document 338. Upon receiving the request, web server 346 sends interface data to wireless device 332 to cause an interface window to be displayed on browser 340. The interface window includes a mechanism whereby the user can enter or select the name of an electronic document that is located on wireless device 332. In response to selecting a particular document, the electronic document is downloaded, for example using the File Transfer Protocol (FTP), to web server 346. For example, web server 346 may include one or more Common Gateway Interface (CGI) scripts that are configured to communicate with the user's browser application and which allow the user to submit information, for example an electronic document file, which is then automatically sent from the wireless device 332 to the web server 346. In one embodiment, the downloaded file is automatically forwarded to print driver 350 to generate a print ready file that is then communicated to MFP 336 to generate a hard copy of electronic document 338.
